PROGRAMS

 Photoshop  Fireworks  Git  Trello

LANGUAGES & FRAMEWORKS

 HTML5  CSS3  JavaScript (ES6)  Python(minor)  Bootstrap 3 & 4  jQuery & other libraries

PROJECTS

Virtual Glasses

www.VirtualGlasses.tk

- Use JavaScript libraries (clmTrackr) to detect eyes and face to set glasses on face when a user uploads a photo file using canvas to draw the image to set the selected glasses
- Uses geometry to calculate angle between two points in order to set the glasses as best as possible

Random Quote

www.RandomQuote.ml

- Grab random quotes from data set and change them dynamically using JavaScript
- Locally stores already displayed quotes so displays all quotes before repeating

WikiViewer

www.WikiViewer.tk

- Displays the first 10 Wikipedia results from a searched key term using the Wikipedia API
- Dynamically displays results using JavaScript and Animate.css for transitions

Twitch Streamers

www.TwitchStreamers.tk

- Using an API shows what users are online vs offline
- Dynamically displays users based on users' sort settings

Weather App

www.localweather.ga

- Local weather information using two API's
- Current and five-day forecast
- Celsius/Fahrenheit conversion via JS function
